**2023 Best Management Practice Plan  
Lynn**

**FY24 Percentage of assessment allocated to specific measures as prescribed by individual municipalities  
Best Management Practice (BMP) in the City of Lynn**

NEMMC is requesting a 3% increase above the FY2023 certified assessment for a FY2024 operational budget. During FY2023 the District reorganized allowing more technicians in the field and the district is anticipated to be at full staff this year. FY2023 allowed the opportunity to replace one of our frontline heavy equipment pieces. Due to ongoing supply shortages, the district was unable to make intended vehicle replacement purchases. Our FY2024 budget addresses funding for an increase of approximately \$84,000 for regional aerial larviciding treatments. This also includes the increased costs of materials, energy, fuel, pesticides, full staffing and two vehicle replacements. The State mandated EV First Initiative comes with a substantial cost increase when replacing vehicles. Regional environmental changes remain challenging to plan for a “normal” year of mosquito control. Often dictated by the weather, mosquito populations, additional treatment for viruses and requests from member municipalities, NEMMC will work diligently to deal with exceptional mosquito nuisance and health issues.

Assessment: As estimated by the Massachusetts Department of Revenue, Division of Local Services, in accordance with Chapter 516 of the General Laws of the Commonwealth. The assessment formula is based on a regional concept, which considers square miles and evaluation. The district offers this breakdown as a general guide to how funds are allocated specific to your community.

FY24 Estimated District Budget for the City of Lynn	\$ 77,077.00
FY24 State Reclamation and Mosquito Control Board	\$ 3,284.00
FY24 Total Estimated Assessment for the City of Lynn	\$ 80,361.00

**District Control Measures specific to Lynn**

General Operational Cost Share

Regional Adult Mosquito Surveillance Program

Regional Vector / Virus Intervention

Surveillance

Ground Larviciding

Catch Basin Treatments

Manual Ditch Maintenance

Adulticiding (**Resident and/or Board of Health requests**)

Barrier Treatment (**School officials and/or Board of Health requests**)

Ditch Maintenance / Wetlands Management

Tire Recycling Program

Property Inspections

Mosquito Habitat Mitigation

Research and Development

Education and Outreach

Social Media

**NOTE:** Any adulticiding, larviciding or treatment of catch basins for mosquito control on public school property requires a current IPM (Integrated Pest Management) Plan. We are often asked by local Boards of Health and/or athletic directors to treat ball fields and/or parks that may be owned/used by the school departments, and without an IPM plan that includes our materials we may not be able to assist.

## Board of Health Checklist for 2023

☐ **Schedule an annual Board of Health meeting/ presentation with NEMMC**

Note: meetings will only be scheduled between the dates of October 1st - June 1st

☐ **Review login information for Municipal Toolbox on NEMMC website**

Our Liaison will e-mail you the password and login (see contact below)

☐ **Update School IPMs to have all current and recently added NEMMC pesticide products**

Recently added pesticide products include Metalarv XRP and Merus 3.0

☐ **Schedule Barrier Treatment for schools, parks, and/or public areas for peak mosquito season**

Note: scheduled barrier treatments are recommended between July 15th – August 25th

☐ **Check with Department of Public Works for field access for barrier treatments once scheduled**

☐ **Notify NEMMC with Board of Health contact changes**

Work phone, cell phone, and email are required of primary and secondary contacts

☐ **Review District Phased Response to WNV/EEE Virus Isolations in Integrated Pest and Vector Management Plan (IPVMP)**

For any questions on where to find this information, scheduling, and/or how to complete these tasks, please reach out to our Board of Health Liaison:

Barry Noone, Director/Board of Health Liaison

Cell: (978) 609-1859

Office: (978) 352- 2800 Email: [barry.noone@mass.gov](mailto:barry.noone@mass.gov)

## 2023 NEMMC Protocols for District Arboviral Events

Climate change is expected to affect the geographic and seasonal patterns of mosquito-borne diseases in the United States. The northeast is experiencing an increase in precipitation and unusually hot temperatures. Since EEE is more prevalent in wetter years and WNV in hotter years the likeness of the district experiencing EEE and/or WNV events in any given year is possible, in some years both viruses can present substantial risk. The district feels that it is beneficial to our subscribing municipalities to set prevention and response criteria preparing for both mosquito-borne viruses.

### **District Prevention for WNV and EEE**

- Adult mosquito surveillance and DPH virus testing
- Larviciding areas that can promote mosquito breeding including municipal catch basins
- Public notification to use personal protective measures from spring to first hard frost
- Wetlands management and stormwater maintenance
- Property inspections to larvicide standing water and remove containers holding water
- Early barrier treatments for public parks, recreation areas and schools
- Tire disposal program

### **District Response for WNV and EEE**

If *risk level increases* for municipality but no virus in municipality:

- Public notification to use personal protective measures
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete barrier treatments

If *bird biting mosquitoes* in municipality test positive for virus:

- Public notification to use personal protective measures
- Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Retreatment of catch basins (if WNV) in focal area
- Retreatment of hummock swamps (if EEE) in focal area

If *human biting mosquitoes* in municipality test positive for virus:

- Public notification to use personal protective measures Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete a block adulticide of focal area
- Recommendation for municipality to complete barrier treatments

If *mammal or human case* of WNV or EEE in municipality:

- Public notification to use personal protective measures
- Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete a block adulticide of focal area
- Recommendation for municipality to complete barrier treatments

## Summary of NEMMC District Operations Completed in Lynn during 2022

Date	Activity Completed
3/3/2022	2022 Draft Best Management Plans (BMP) e-mailed to BOH for review
3/8/2022	2022 Integrated Pest and Vector Management Plan published to NEMMC website
3/31/2022	District-wide Zoom NEMMC BOH/DPW Mosquito Control Overview Presentation & Spring Welcome
4/11/2022	Residential Pesticide Exclusion Received (1)
4/12/2022	Larviciding- Nells Pond Road (3.70 lbs. Vectobac-G)
4/12/2022	Habitat Site Inspections (6)
4/13/2022	Habitat Site Inspections (2)
4/21/2022	Habitat Site Inspections (5)
4/27/2022	Larviciding- Elsie Road (0.50 lbs. Vectobac-G)
4/27/2022	Habitat Site Inspection (1)
5/10/2022	Residential Pesticide Exclusions Received (2)
5/14/2022	Residential Pesticide Exclusion Received (1)
6/2/2022	Residential Adulticiding Requests (2)
6/9/2022	Catch basin larviciding (200 Metalarv XRP)
6/9/2022	Residential Adulticiding Requests (3)
6/10/2022	Catch basin larviciding (454 Metalarv XRP)
6/13/2022	Catch basin larviciding (196 Metalarv XRP)
6/14/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
6/15/2022	Catch basin larviciding (775 Metalarv XRP) + Little Spouts LLC (6 Altosid WSP)
6/16/2022	Catch basin larviciding (212 Metalarv XRP)
6/16/2022	Residential Adulticiding Requests (4)
6/21/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
6/21/2022	Catch basin larviciding (1,027 Metalarv XRP) + Girls Inc. (2 Altosid WSP)
6/22/2022	Catch basin larviciding (252 Metalarv XRP) + Breed MS, Classical HS, Lynn Voc, Cobbett ES (37 Altosid WSP) + Callahan ES (4 Fourstar-90)
6/22/2022	Catch Basins Lynn Completed = Total 3,165 (3,116 + 49 Schools)
6/23/2022	Residential Adulticiding Requests (3)
6/27/2022	Residential Pesticide Exclusion Received (1)
6/28/2022	Pools Submitted to DPH for WNV/EEE Testing- 1
6/30/2022	Residential Adulticiding Requests (3)
7/7/2022	Residential Adulticiding Requests (1)
7/14/2022	Residential Adulticiding Requests (2)
7/19/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
7/28/2022	Residential Adulticiding Requests (2)
8/2/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/4/2022	Residential Adulticiding Requests (3)

## 2023 Best Management Practice Plan: Lynn

8/4/2022	Resident Request Site Inspection- Cedar Brook Road
8/8/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/11/2022	Residential Adulticiding Requests (1)
8/16/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/25/2022	Residential Adulticiding Requests (1)
8/31/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
9/1/2022	Residential Adulticiding Requests (2)
10/1/2022	Adult mosquito surveillance and DPH testing concluded for the season
10/15/2022	NEMMC attendance for Lynn Tire Collection Day (72 tires collected)
12/8/2022	Tires collected for disposal- Allston Street (4)

- **27 Residential adulticide (ULV) service requests, up from 10 in 2021**
- **1 Residential property inspection service request, up from 0 in 2021.**  
Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can help reduce mosquito populations.
- **14 mosquito habitat site inspections**
- **Catch basin larviciding was completed on 6/22/2022: 3,165 total basins were treated (3,116 municipal + 49 school)**
- **5 Residential pesticide exclusion was filed with the district this year from Lynn**
- **76 tires were removed for disposal during the City of Lynn's Hazardous Waste Collection Day on 10/15/2022**

## 2022 Lynn Mosquito & Arbovirus Surveillance Summary

There were no WNV/EEE mosquito isolations, human or animal cases in Lynn in 2022. At the end of 2022, the arboviral risk level for Lynn remained at REMOTE for EEE and LOW for WNV. Risk Categories are described on pages 13, 22, 25 of the 2022 Massachusetts State Arbovirus Surveillance and Response Plan.

Massachusetts DPH assesses arboviral risk levels based on many factors including but not limited to mosquito isolations, locations of acquired veterinary and human infections, virus history locally and in bordering states, weather conditions present and predictions, and current mosquito populations and future trends.

State arbovirus risk updates: <https://www.mass.gov/info-details/massachusetts-arbovirus-update#risk-maps->

- 8 mosquito pools/batches were sent from Lynn to the MDPH lab for testing in 2022, all batches tested negative for EEE/WNV.

### Mosquito virus isolation history (WNV/EEE) in Lynn:

Collection Date	Species	Test Type	Result
8/19/2019	<u>Culex pipiens</u>	WNV	Positive
9/4/2019	<u>Culex pipiens</u>	WNV	Positive
7/24/2017	<u>Culex pipiens/restuans complex</u>	WNV	Positive
7/31/2017	<u>Culex pipiens</u>	WNV	Positive

2023 Best Management Practice Plan: Lynn

7/31/2017	<u>Culex pipiens</u>	WNV	Positive
8/7/2017	<u>Culex pipiens/restuans</u> complex	WNV	Positive
8/14/2017	<u>Culex pipiens</u>	WNV	Positive
8/14/2017	<u>Culex pipiens</u>	WNV	Positive
8/14/2017	<u>Culex pipiens</u>	WNV	Positive
8/14/2017	<u>Culex pipiens</u>	WNV	Positive
8/14/2017	<u>Culex pipiens</u>	WNV	Positive

<i>Aedes cantator</i> (salt marsh)	1	0	-100%	NO	-35%
<i>Aedes canadensis</i> (snowmelt/woodland pool)	0	0	-	NO	-38%

#### WNV/EEE bridge vectors/human biters

- Due to the prolonged drought event during 2022, there was a decrease in the fresh floodwater species *Ae. vexans* of 100% and *Cx. salinarius* of 96% in Lynn. The cattail species *Cq. perturbans* had a slight recovery due to an abundance of late summer precipitation during 2021 and showed a population increase of 120% in 2022 in Lynn. 1 batch of *Cq. perturbans* did test positive in Rowley for WNV in 2022. There were no EEE isolates in these species during 2022. Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can also reduce these populations.

#### WNV primary vectors/bird biters (*Cx. pipiens/restuans*)

- There was a 29% decrease in collections of WNV primary vectors from 2021 to 2022 in Lynn. There is typically an increase in these vector species during hot dry years, but timely catch basin cleaning and treatments helped keep *Culex* mosquito populations in check. Only 2 batches of *Cx. pipiens* tested positive in Lynnfield and Haverhill for WNV in 2022. There were no EEE isolates in these species during 2022. Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can also reduce these populations.

#### EEE primary vectors/bird biters (*Cs. melanura*)

- While 2019 was an unprecedented year for EEE statewide, due to early and sustained drought conditions and anticipatory targeted larviciding activities in the Northeast from 2020 through 2022. In 2022, the district saw a 30% decrease in *Cs. melanura* populations from 2021. It will take several years for *Cs. melanura* populations to recover from the droughts. There were no EEE isolates in these species during 2022.

#### Pest Status salt marsh mosquitoes (*Ae. sollicitans*)

- Ae. sollicitans*, a summer-fall salt marsh species, also suffered from drought conditions. With less precipitation falling on the marshes the hatches were restricted to the usual tidal flow triggers. Total salt marsh mosquito populations in the district decreased by 49% from 2021.

### *2023 Best Management Practice Plan: Lynn*

From mid-July to the first hard frost, Lynn residents should take necessary precautions to reduce the risk of infection from EEE/WNV and other mosquito borne viruses, regardless of low mosquito populations and/or aggressiveness of control.

A hard, or killing frost, is defined meteorologically as two consecutive hours of temperatures below 28 degrees Fahrenheit or three hours below 32 degrees. This will occur at different times for different communities, and there may even be variation within communities based on local geography. Although mosquitoes are not killed until a hard frost occurs, they are extremely unlikely to be active when temperatures fall below 50 degrees in the evening (Page 15 of the 2022 MA Arbovirus Plan listed below).

Refer to the 2022 Massachusetts State Arbovirus Surveillance and Response Plan viewed online at:

<https://www.mass.gov/lists/arbovirus-surveillance-plan-and-historical-data>
