**2023 Best Management Practice Plan  
Rowley**

**FY24 Percentage of assessment allocated to specific measures as prescribed by individual municipalities  
Best Management Practice (BMP) in the Town of Rowley**

NEMMC is requesting a 3% increase above the FY2023 certified assessment for a FY2024 operational budget. During FY2023 the District reorganized allowing more technicians in the field and the district is anticipated to be at full staff this year. FY2023 allowed the opportunity to replace one of our frontline heavy equipment pieces. Due to ongoing supply shortages, the district was unable to make intended vehicle replacement purchases. Our FY2024 budget addresses funding for an increase of approximately \$84,000 for regional aerial larviciding treatments. This also includes the increased costs of materials, energy, fuel, pesticides, full staffing and two vehicle replacements. The State mandated EV First Initiative comes with a substantial cost increase when replacing vehicles. Regional environmental changes remain challenging to plan for a “normal” year of mosquito control. Often dictated by the weather, mosquito populations, additional treatment for viruses and requests from member municipalities, NEMMC will work diligently to deal with exceptional mosquito nuisance and health issues.

Assessment: As estimated by the Massachusetts Department of Revenue, Division of Local Services, in accordance with Chapter 516 of the General Laws of the Commonwealth. The assessment formula is based on a regional concept, which considers square miles and evaluation. The district offers this breakdown as a general guide to how funds are allocated specific to your community.

FY24 Estimated District Budget for the Town of Rowley	\$ 68,324.00
FY24 State Reclamation and Mosquito Control Board	\$ 2,911.00
FY24 Total Estimated Assessment for the Town of Rowley	\$ 71,235.00

**District Control Measures specific to Rowley**

General Operational Cost Share

Regional Adult Mosquito Surveillance Program

Regional Aerial Salt Marsh Larviciding Program

Regional Vector / Virus Intervention

Surveillance

Ground Larviciding

Catch Basin Treatments

Manual Ditch Maintenance

Adulticiding **(By Board of Health approval only)**

Barrier Treatment **(By Board of Health and School Department request only)**

Ditch Maintenance / Wetlands Management

Tire Recycling Program

Property Inspections

Mosquito Habitat Mitigation

Research and Development

Education and Outreach

Social Media

**NOTE:** Any adulticiding, larviciding or treatment of catch basins for mosquito control on public school property requires a current IPM (Integrated Pest Management) Plan. We are often asked by local Boards of Health and/or athletic directors to treat ball fields and/or parks that may be owned/used by the school departments, and without an IPM plan that includes our materials we may not be able to assist.

## Board of Health Checklist for 2022

☐ **Schedule an annual Board of Health meeting/ presentation with NEMMC**

Note: meetings will only be scheduled between the dates of October 1st - June 1st

☐ **Review login information for Municipal Toolbox on NEMMC website**

Our Liaison will e-mail you the password and login (see contact below)

☐ **Update School IPMs to have all current and recently added NEMMC pesticide products**

Recently added pesticide products include Metalarv XRP and Merus 3.0

☐ **Schedule Barrier Treatment for schools, parks, and/or public areas for peak mosquito season**

Note: scheduled barrier treatments are recommended between July 15th – August 25th

☐ **Check with Department of Public Works for field access for barrier treatments once scheduled**

☐ **Notify NEMMC with Board of Health contact changes**

Work phone, cell phone, and email are required of primary and secondary contacts.

☐ **Review District Phased Response to WNV/EEE Virus Isolations in Integrated Pest and Vector Management Plan (IPVMP)**

For any questions on where to find this information, scheduling, and/or how to complete these tasks, please reach out to our Board of Health Liaison:

Barry Noone, Director/Board of Health Liaison

Cell: (978) 609-1859

Office: (978) 352- 2800 Email: [barry.noone@mass.gov](mailto:barry.noone@mass.gov)

## 2023 NEMMC Protocols for District Arboviral Events

Climate change is expected to affect the geographic and seasonal patterns of mosquito-borne diseases in the United States. The northeast is experiencing an increase in precipitation and unusually hot temperatures. Since EEE is more prevalent in wetter years and WNV in hotter years the likeness of the district experiencing EEE and/or WNV events in any given year is possible, in some years both viruses can present substantial risk. The district feels that it is beneficial to our subscribing municipalities to set prevention and response criteria preparing for both mosquito-borne viruses.

### District Prevention for WNV and EEE

- Adult mosquito surveillance and DPH virus testing
- Larviciding areas that can promote mosquito breeding including municipal catch basins
- Public notification to use personal protective measures from spring to first hard frost
- Wetlands management and stormwater maintenance
- Property inspections to larvicide standing water and remove containers holding water
- Early barrier treatments for public parks, recreation areas and schools
- Tire disposal program

### District Response for WNV and EEE

*If risk level increases for municipality but no virus in municipality:*

- Public notification to use personal protective measures
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete barrier treatments

*If bird biting mosquitoes in municipality test positive for virus:*

- Public notification to use personal protective measures
- Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Retreatment of catch basins (if WNV) in focal area
- Retreatment of hummock swamps (if EEE) in focal area

*If human biting mosquitoes in municipality test positive for virus:*

- Public notification to use personal protective measures
- Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete a block adulticide of focal area
- Recommendation for municipality to complete barrier treatments

*If mammal or human case of WNV or EEE in municipality:*

- Public notification to use personal protective measures
- Supplemental adult mosquito trapping and additional DPH virus testing in risk areas
- Additional larviciding of freshwater wetlands and flooded areas
- Recommendation for municipality to complete a block adulticide of focal area
- Recommendation for municipality to complete barrier treatments

## Summary of NEMMC District Operations Completed in Rowley during 2022

Date	Activity Completed
6/22/2021	Tire collected for disposal- Warehouse Lane (8)
6/27/2021	Tire collected for disposal- Warehouse Lane (3)
7/27/2021	Barrier Adulticide Treatment- Pine Grove School (3.33 oz Suspend Polyzone)
3/3/2022	2022 Draft Best Management Plans (BMP) e-mailed to BOH for review
3/8/2022	2022 Integrated Pest and Vector Management Plan published to NEMMC website
3/31/2022	District-wide Zoom NEMMC BOH/DPW Mosquito Control Overview Presentation & Spring Welcome
4/12/2022	Larviciding- Weathersfield Road (9.56 lbs. Vectobac-G)
4/12/2022	Habitat Site Inspections (5)
4/12/2022	Residential Pesticide Exclusions Received (20)
4/13/2022	Habitat Site Inspections (1)
4/14/2022	Habitat Site Inspections (2)
4/15/2022	Habitat Site Inspections (4)
4/20/2022	Larviciding- Main Street (7.72 lbs. Vectobac-G)
4/20/2022	Habitat Site Inspections (5)
5/2/2022	Larviciding- Central Street (8.90 lbs. Vectobac-G)
5/2/2022	Habitat Site Inspection (1)
5/3/2022	Notification of Aerial Larvicide Application Notice for 2022 sent to media outlets
5/9/2022	Residential Pesticide Exclusion Received (1)
5/11/2022	Salt marsh dip station check- pre aerial application
5/16/2022	Salt marsh dip station check- pre aerial application
5/17/2022	Salt marsh dip station check- pre aerial application
5/18/2022	Larviciding- Stackyard Road, Oyster point Road, Hammond Street (0.50 gal Cocobear)
5/18/2022	Larviciding- Stackyard Rd., Oyster point Rd., Hammond St. (33.45 lbs. Vectobac-G)
5/18/2022	Salt marsh dip station check- pre aerial application
5/24/2022	Resident Request Site Inspection- Lebel Way
6/10/2022	Salt marsh dip station check- pre aerial application
6/13/2022	Aerial operation larvicide salt marsh- 720 acres
6/14/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
6/15/2022	Salt marsh dip station check- post aerial application
6/22/2022	Greenhead Traps out
7/11/2022	Salt marsh dip station check- pre aerial application
7/13/2022	Salt marsh dip station check- pre aerial application
7/14/2022	Aerial operation larvicide salt marsh- 600 acres
7/15/2022	Salt marsh dip station check- post aerial application
7/25/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/2/2022	Pools Submitted to DPH for WNV/EEE Testing- 2 NEGATIVE

## 2023 Best Management Practice Plan: Rowley

8/2/2022	Catch basin larviciding- (114 Altosid WSP)
8/8/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/9/2022	Catch basin larviciding- (165 Altosid WSP)
8/9/2022	Salt marsh dip station check- pre aerial application
8/10/2022	Salt marsh dip station check- pre aerial application
8/11/2022	Aerial operation larvicide salt marsh- 600 acres
8/12/2022	Catch basin larviciding- (430 Altosid WSP) + Pine Grove E.S. (24 VectoMax WSP)
8/12/2022	Catch Basins Rowley Completed = Total 733 (709 + 24 Schools)
8/12/2022	Salt marsh dip station check- post aerial application
8/16/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
8/23/2022	Pools Submitted to DPH for WNV/EEE Testing- <b>1 WNV POSITIVE</b> (Cq. perturbans) No risk level change, BOH notified
8/24/2022	Supplemental trap placed for WNV vector surveillance; no species of concern collected
9/7/2022	Salt marsh dip station check
9/8/2022	Salt marsh dip station check
9/12/2022	Larviciding- Stackyard Rd., Oyster point Rd., Hammond St. (40.00 lbs. Vectobac-G)
9/12/2022	Salt marsh dip station check
9/14/2022	Greenhead Traps in
9/28/2022	Pools Submitted to DPH for WNV/EEE Testing- 1 NEGATIVE
11/19/2022	NEMMC attendance for Rowley Tire Collection Day (65 tires collected)
10/1/2022	Adult mosquito surveillance and DPH testing concluded for the season

- **Rowley had a total of 1 Resident (unchanged from 1 in 2021) and 0 BOH Larvicide Service Requests**  
Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can help reduce mosquito populations.
- **1 Board of Health adulticide service requests (barrier treatment)**
- **18 Mosquito habitat site inspections**
- **Catch basin larviciding was completed on 8/12/2022: 733 total basins were treated**
- **21 Residential pesticide exclusion was filed with the district this year from Rowley**
- **76 Discarded tires were collected at Rowley's Hazardous Waste Collection Day**

## 2021 Rowley Mosquito & Arbovirus Surveillance Summary

There was 1 WNV mosquito isolation and no risk changes with this notification. There were no EEE mosquito isolations or WNV/EEE human or animal cases in Rowley in 2022. At the end of 2021, the arboviral risk level for Rowley remained at LOW for EEE and remained LOW for WNV. Risk Categories are described on pages 13, 22, 25 of the 2022 Massachusetts State Arbovirus Surveillance and Response Plan.

Massachusetts DPH assesses arboviral risk levels based on many factors including but not limited to mosquito isolations, locations of acquired veterinary and human infections, virus history locally and in bordering states, weather conditions present and predictions, and current mosquito populations and future trends.

## 2023 Best Management Practice Plan: Rowley

State arbovirus risk updates: <https://www.mass.gov/info-details/massachusetts-arbovirus-update#risk-maps->

- 8 mosquito pools/batches were sent from Rowley to the MDPH lab for testing in 2022. 1 batch of *Cq. perturbans* (mammal biter/bridge vector) tested positive for WNV on 8/23/2022. No mosquito batches tested positive for EEE.
- Following district virus response protocol, a supplemental trap was set on 8/24. There were no subsequent virus isolations for the remainder of the season.

### Mosquito virus isolation history (WNV/EEE) in Rowley:

Collection Date	Species	Test Type	Result
8/23/2022	<i>Coquillitidia perturbans</i>	WNV	Positive
9/08/2014	<i>Culex pipiens/restuans</i> complex	WNV	Positive
7/23/2013	<i>Culex restuans</i>	WNV	Positive
9/14/2012	<i>Culiseta melanura</i>	EEE	Positive
10/5/2011	<i>Culiseta melanura</i>	WNV	Positive
8/31/2005	<i>Culex pipiens/restuans</i> complex	WNV	Positive

Total Mosquitoes Collected in Rowley*	2021	2022	% Change
CDC CO2/Light Traps (1) - Mammal feeders/bridge vectors	30	4,095	13550%
Gravid Traps (1)- WNV primary vectors	17	43	153%
<b>Totals</b>	<b>47</b>	<b>4,138</b>	<b>8704%</b>

Mosquito Species- pest/disease list- Rowley*	2021	2022	% Change	WNV/EEE +	District Total % Change 2021 to 2022
<i>Culiseta melanura</i> (red maple swamp/acid bog)	0	51	-	NO	-30%
<i>Culex pipiens</i> (container/catch basins/heavy organics)	0	5	-	NO	14%
<i>Culex restuans</i> (container/catch basins)	1	3	200%	NO	-68%
<i>Culex salinarius</i> (brackish water/phragmites/roadside ditches)	8	0	-100%	NO	-99%
<i>Coquillitidia perturbans</i> (cattail)	0	3,447	-	WNV	41%
<i>Aedes vexans</i> (rainwater/fresh floodwater)	7	18	157%	NO	-98%
<i>Aedes japonicus</i> (tree hole/container breeder)	11	16	45%	NO	-19%
<i>Aedes sollicitans</i> (salt marsh)	1	0	-100%	NO	-68%
<i>Aedes cantator</i> (salt marsh)	5	171	3320%	NO	-35%
<i>Aedes canadensis</i> (snowmelt/woodland pool)	0	141	-	NO	-38%

Red denotes there were positive mosquito batch in the total collections during 2022

\*Note: Rowley had a trap location change in the spring of 2022. This new trap location is approximately 2 miles from the historic trap and there will be differences due to habitat changes when comparing data between years.

**WNV/EEE bridge vectors/human biters**

- Due to trap changes in the spring of 2022, we collected many important arboviral species we didn't collect in 2021 from the previous trap site 2 miles away. The cattail species *Cq. perturbans* and *Ae. canadensis* are predominant species at this current site and showed a large increase in collections in Rowley during 2022. 1 batch of *Cq. perturbans* did test positive in Rowley for WNV in 2022. There were no EEE isolates in these species during 2022. Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can also reduce these populations.

**WNV primary vectors/bird biters (*Cx. pipiens/restuans*)**

- There was a 700% increase in collections of WNV primary vectors from 2021 to 2022 in Rowley. There is typically an increase in these vector species during hot dry years, but timely catch basin cleaning and treatments helped keep *Culex* mosquito populations in check. Only 2 batches of *Cx. pipiens* tested positive in Lynnfield and Haverhill for WNV in 2022. There were no EEE isolates in these species during 2022. Informing residents that they can contact the district to inspect for standing water and help identify new breeding areas can also reduce these populations.

**EEE primary vectors/bird biters (*Cs. melanura*)**

- While 2019 was an unprecedented year for EEE statewide, due to early and sustained drought conditions and anticipatory targeted larviciding activities in the Northeast from 2020 through 2022. In 2022, the district saw a 30% decrease in *Cs. melanura* populations from 2021. It will take several years for *Cs. melanura* populations to recover from the droughts. This new site in Rowley collected more *Cs. melanura* for surveillance than the previous site giving us an adequate reference point going forward. It will take several years for *Cs. melanura* populations to recover from the droughts. There were no EEE isolates in these species during 2022.

**Pest Status salt marsh mosquitoes (*Ae. sollicitans*)**

- *Ae. sollicitans*, a summer-fall salt marsh species, also suffered from drought conditions. With less precipitation falling on the marshes the hatches were restricted to the usual tidal flow triggers. Total salt marsh mosquito populations in the district decreased by 49% from 2021.
- Rowley had a total of 3 salt marsh aerial operation larvicide treatments (1,920 acres) during 2022. June 13<sup>th</sup>, July 14<sup>th</sup> and the last on August 11<sup>th</sup> (See summary of activities)

Due to EEE/WNV history in Rowley and surrounding communities, from July to the first hard frost, residents should take necessary precautions to reduce the risk of infection from these viruses, regardless of low mosquito populations and/or aggressiveness of control.

A hard, or killing frost, is defined meteorologically as two consecutive hours of temperatures below 28 degrees Fahrenheit or three hours below 32 degrees. This will occur at different times for different communities, and there may even be variation within communities based on local geography. Although mosquitoes are not killed until a hard frost occurs, they are extremely unlikely to be active when temperatures fall below 50 degrees in the evening (Page 15 of the 2022 MA Arbovirus Plan listed below).

Refer to the 2022 Massachusetts State Arbovirus Surveillance and Response Plan viewed online at:

<https://www.mass.gov/lists/arbovirus-surveillance-plan-and-historical-data>
